ABOUT ME

Front-end developer (Angular) with three years' experience on the digital platforms of Italian education and cultural heritage: HUB Scuola, the main learning platform for Italian schools, and platforms for the National Central Library of Rome and CNR research infrastructures linked to the European Open Science Cloud — with a consistent focus on web accessibility.

Since leaving employment in May 2026 I have been working on independent projects: a documented, tested workflow that keeps knowledge bases organised with the help of a language model and human review, the self-hosted infrastructure that runs it, and a network audit tool still in development. I work well both inside structured teams and autonomously on the features entrusted to me, with occasional direct contact with clients. English at C1 level (CEFR, self-assessed).

My method is structure before product: break the problem down, document every decision, and check before trusting, so that the work can be reviewed, handed over and maintained.

WORK EXPERIENCE

24 Jan 2023 – 1 May 2026

Florence and Pisa, Italy

Front-end developer

Gruppo Meta / M.E.T.A. S.r.l. (ETT Group), later Deda Next S.r.l. (Dedagroup)

Front-end developer (Angular) in a software house specialised in the digitalisation of educational publishing, cultural heritage and research. Permanent contract; work split between the Florence and Pisa offices.

- Angular development for Mondadori Education's HUB Scuola, the main digital learning platform for Italian schools: rollout of the new design system and independent development of new features, in particular interactive quizzes and exercises embedded in e-books.
- Translation of design mock-ups into Angular components; design and implementation of entire application flows of varying complexity.
- Web accessibility (a11y) in line with EU Directive 2016/2102; refactoring, debugging and unit testing.
- Large-scale modernisation of legacy viewers for complex editorial formats, carried out autonomously in close cooperation with the design and UX teams.
- Front-end contribution, within project teams, to platforms for national cultural and research institutions: digitalisation of the collections of the National Central Library of Rome (metaCMS suite, interoperable with Europeana), and CNR research infrastructures in the digital humanities under the H2IOSC project, funded by NextGenerationEU (Italian NRRP) and part of the Italian contribution to the European Open Science Cloud (EOSC).
- Participation in client alignment calls, including on projects for regional public bodies: contributing technical proposals and, in urgent cases, liaising directly with the client.
- Development and integration of Node.js APIs together with the back-end team; data visualisation (charts and tables).
- Tools: Angular, TypeScript, Node.js, Docker, Postman, Figma, Git (structured repositories with submodules).

EDUCATION AND TRAINING

1 Oct 2016 – 7 Jun
2022

Florence, Italy **EFMD EQUIS** 6

Laurea in Informatica (Bachelor's Degree in Computer Science) — Class L-31, Computer Science and Technologies

University of Florence — School of Mathematical, Physical and Natural Sciences

Three-year degree in Computer Science (180 ECTS).

- Programming and software engineering: programming, programming methodologies, concurrent programming, algorithms and data structures, interpreters and compilers, theoretical computer science.
- Systems and networks: operating systems, computer architecture, computer networks.
- Data and mathematics: databases and information systems, probability and statistics, numerical analysis, calculus I and II, linear algebra, discrete mathematics and logic, general physics.
- Electives from the Master's degree curriculum: multimedia design and production; computer forensics.
- Business skills.
- Curricular internship (12 ECTS).
- Final thesis: "Progressive Web Applications and Web Operating Systems" (supervisor: Prof. Rosario Pugliese; co-supervisor: Prof. Francesco Tiezzi). An analysis of Progressive Web Apps as a standards-based, cross-platform alternative to native applications, including a fully working PWA developed with Node.js, Ionic, Vue.js and Firebase.

22 Aug 2022 – 12 Oct
2022

Indianapolis, United
States

Program for Intensive English (PIE) — Level 5 of 7 completed

Indiana University–Purdue University Indianapolis (IUPUI) — IU School of Liberal Arts

Intensive academic English programme (Fall 1 session, minimum 140 hours of classroom instruction) at an American university.

- Completed Level 5 of 7 in Reading–Writing and Listening–Speaking, grade average 88/100 (PIE Letter of Achievement, 13 October 2022).
- Academic writing, oral presentation and discussion skills.
- Full immersion in an international student environment.

28 Oct 2025 – Current

Prato, Italy

Sommelier training course — Level 1 completed, Level 2 in progress

Associazione Italiana Sommelier (AIS) — Tuscany

Professional sommelier training: viticulture and oenology, tasting technique and sensory analysis, Italian and international wine regions, food and wine pairing, wine service.

PROJECTS

May 2026 – Current

Knowledge Genome Orchestrator

Independent project

A documented, tested workflow that keeps personal knowledge bases organised: a language model reads each new note and proposes updates to a wiki, plain scripts check every proposal, and nothing is saved without human review.

- Every proposal is validated by deterministic scripts before it touches any file, and reaches a person as a pull request to accept or refuse; pages keep their own history instead of being overwritten.
- Tests before code: generated code must come with tests that fail before the implementation exists; over 850 automated tests with no dependency on the model or the network.

- Private notebooks encrypted, with keys kept in a password manager and never stored on disk.
- Extensive technical documentation (18 documents, including a register of every defect found and why).
- Tried out in an unpaid pilot with an accountancy firm (knowledge management for their documents, with minor network fixes); the collaboration did not continue beyond the pilot phase.

2026 – Current

Self-hosted infrastructure

Independent project

A small home infrastructure on two machines, described as code in a single repository and documented as it evolved.

- Thirteen containerised services managed with Docker Compose: Git hosting (Forgejo), workflow automation (n8n with PostgreSQL and Redis), password manager, notifications, reverse proxy.
- Update checker that reports what can be updated and at what risk, with a plain-language summary; updates are always applied by hand.
- Network divided into separate zones behind an OPNsense firewall; ordered shutdown of the two machines on battery during power cuts.
- Workstation reproducible from a public dotfiles repository managed with chezmoi: software repositories, packages, applications, development tools and editor configuration restored on a new machine with a single command; private keys kept out of the repository.

2026 – Current

NETKIT — network audit tool

Independent project, in development

A terminal application to help consultants check the networks of small companies only within an agreed, signed perimeter and time window.

- Consent recorded and fingerprinted before any scan; every address checked against the agreed perimeter; scans stop automatically when the time window ends.
- Core engine in strictly typed TypeScript on Bun with SQLite and around 200 tests; the terminal interface is the next phase. Not yet used on real networks.

SKILLS

Front-end and web

TypeScript · Angular · CSS · JavaScript · implement front-end website design · design user interface · World Wide Web Consortium standards · use markup languages

Automation and documentation

workflow automation (n8n) · automated testing · AI-assisted development · technical documentation · Obsidian

Collaboration

work with design and UX teams · work with back-end teams · contribute technical proposals in client calls · use online tools to collaborate · adapt to changes in technological development plans

Programming and software engineering

use software design patterns · develop software prototype · object-oriented modelling · use object-oriented programming · use software libraries · debug software

Infrastructure and tools

tools for software configuration management · Git · Docker · Forgejo · n8n · Ollama · Proxmox

LANGUAGE SKILLS

Mother tongue

Italian

English

C1 (CEFR self-assessment). Program for Intensive English, IUPUI, Indianapolis, August–October 2022: Level 5 of 7 completed in Reading–Writing and Listening–Speaking.

LISTENING	READING	WRITING	SPOKEN PRODUCTION	SPOKEN INTERACTION
C1	C1	C1	C1	C1

NETWORKS AND MEMBERSHIPS

1 Oct 2025 – Current

Associazione Italiana Sommelier (AIS) – Tuscany

DRIVING LICENCE

11 Jul 2016 – 27 Mar 2034

Category B

9 Sep 2023 – 27 Mar 2034

Category A

HOBBIES AND INTERESTS

Agriculture, food and beverage culture

Sustainable, non-intensive agriculture and quality food supply chains (Slow Food), a topic I also follow from within the family agricultural business. Viticultural biodiversity through G.R.A.S.P.O., the ampelographic research association recovering ancient and rare grape varieties. Wine culture (AIS member, sommelier in training). Specialty coffee.

Sustainable development, finance and society

Ethical finance, microcredit and ESG investing. Geopolitics, accessibility and digital rights.

ADDITIONAL INFORMATION

Writing

Personal essays on my work, my method and the infrastructure I run, written for a general audience (Medium).

Family agricultural business

Managing director and legal representative of Casal de' Cherubini S.r.l., a family-owned agricultural company managing farmland and rental property in Umbria. Signatory role exercised in agreement with the other family members, with no day-to-day operational involvement.
